surveyed reported
a security breach or
infection in the past
12 months

An all-inclusive,
enterprise-grade
web security
solution for any
type or size of
business

Offers real-
time protection
and thorough
enforcement
of web usage
policies

Provides complete
visibility into
internet activity
across all devices,
users and locations

With the dynamic security landscape increasing in complexity and severity, firewalls can no longer provide complete and effective protection for your business, especially as more users are roaming, using cloud-based apps and accessing the internet off the corporate network.

Guardian Web Protect from Digital Wholesale Solutions is your first – and only necessary – line of defence against online threats, providing complete visibility into internet activity across all locations, devices and users, blocking threats before they reach your network or endpoints.

Using DNS-based or web proxy technology, Cisco Talos intelligence and Cisco Advanced Malware Protection (AMP), Cloud Web Security can determine the trustworthiness of web requests, URLs and files. Determining them as being 'safe', 'malicious' or 'risky', they are subsequently routed, blocked or sent for deeper inspection.

Why choose Guardian Web Protect from Digital Wholesale Solutions?

- > Advanced protection that adds a predictive security enforcement layer at the early stage
- > Fast identification of infected devices and prevention of data exfiltration
- > Fast and reliable without added latency
- > Rapid enforcement of security policies across 25 global data centres
- > 24/7 proactive monitoring and alerting capabilities for high availability
- > Problem management and security operations by a support team of highly experienced engineers
- > Full visibility across all network devices, locations and users via real-time activity logs
- > Enterprise-wide activity search, reporting and identification of targeted attacks to determine potential Cloud and IoT risks
- > Quick and easy deployment of software
- > Powerful out-of-the-box policies, essential testing, service verification and on-boarding and customer training
- > Easy design and integration of Virtual Appliance (VA) and Connection and Active Directory (AD)
